1. Claims 1-23 are presented for examination.
2. Restriction to one of the following inventions is required under 35 U.S.C 121:
  - I. Claims 1-16, drawn to conditionally executing control operations, classified in class 709, subclass 208.
  - II. Claims 17-23, drawn to reboot remote client device using different modes, classified in class 713, subclass 2.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate method such as it is conditionally executing control operations which lacked features of the second group of claims, e.g., rebooting remote client device using different modes, classified in class 713, subclass 2. See MPEP 806.05(d).

Invention II has separate utility such as it is usable by any system which lacked features of group I of claims; e.g., conditionally executing control operations classified in class 709, subclass 208.

4. Because these inventions are distinct for the reasons given above and because the search required for each group is different and not co-extensive for examination purpose because these groups would require different searches on PTO's classification class and subclass e.g.
